

Bailey's Gluten Response

Tested Mar 3, 2026

Your result

GLUTEN RESPONSE

Gluten-related signal found

This is the result from the test card you read at home, saved with what you told us about Bailey.

What it means

This test found the immune response Vetica checks for in relation to gluten.

Gluten is worth a closer look across food, treats, chews, and other extras.

What you shared

CURRENT SYMPTOMS

Loose stool or diarrhea, Gas or gurgly tummy,
Licking or chewing paws

TREATS OR EXTRAS

Treats or biscuits, Table food

CURRENT FOOD

Brand A adult chicken and rice kibble

RECENT GLUTEN EXPOSURE

Not sure

Options from here

Check the food, treats and extras you listed

Look for wheat, barley or rye on labels for regular food, treats, chews and occasional extras. If you decide to change something, change one thing at a time so it is easier to see what happens.

Track symptoms and changes

Keep a simple record of symptoms, food, treats, medicines and other important changes so patterns are easier to see.

Talk with your veterinarian

Bring this report if symptoms persist, return or worsen, or you want a broader review.

Questions you may want to ask

Questions to discuss with your veterinarian.

- How should we interpret this Vetica result alongside Bailey's symptoms and history?
- Would a food trial or one controlled change make sense, and how long should it last?
- Are there other tests or evaluations worth considering based on Bailey's symptoms and this result — for example stool testing, blood work, or imaging?
- Could food, treats, medicines, supplements, or other exposures still be contributing?
- What changes or symptoms would make you want to see Bailey again sooner?
- Does the gluten exposure I recorded change how you would approach the diet?

FOLLOW WHAT HAPPENS NEXT

21-Day Food Check

Follow one focused change with quick check-ins on Days 7, 14 and 21. You can use check-ins on their own or add Vetica test results along the way.

When to get more help

If your dog is worsening or has concerning symptoms, contact your veterinarian.

About this test

This test looks for an immune response in saliva related to gluten. Read the result alongside recent gluten exposure, food, treats, and what you are seeing at home.

This is a point-in-time result from one saliva sample.

Line darkness does not indicate severity, concentration, or how strongly a dog is affected.
